

Alex Morand

Backend Engineer - High-Volume Ingestion, APIs & Latency

Three years on production backends: fleet telemetry ingestion, REST APIs consumed by operational teams, on-call.
Looking for a backend platform role where data volume and reliability are the hard part.

Spanish B1

PROJECTS

Seedling

2024 - present
Open-source CLI that generates realistic test data from a database schema. Built, documented and maintained solo.
Python, Click, PostgreSQL, GitHub Actions
[seedling.example.com](#)

Tideline

2023
Self-hosted dashboard tracking river levels from a public API, with alerting.
Python, SQLite, Grafana

INTERESTS

- Bouldering
- Film photography
- Board games
- Open-source contributions

EXPERIENCE

HELMVALE CONSULTING Software Engineer (consultant) 2023 - present

NORTHBAY LOGISTICS

2025

Backend Engineer - Vehicle Telemetry Platform · Lyon, France

Logistics High volume

- Built the ingestion service receiving GPS pings from 4,000 vehicles and writing them to a time-series store.
- Reworked queries and added a cache layer, taking the tracking endpoint from 1.2s to 300ms at p95.
- Designed and shipped the REST API consumed by the customer's dispatch application.
- Joined the on-call rotation and wrote the runbooks for the three most frequent incidents.

Env. Python, FastAPI, PostgreSQL/TimescaleDB, Redis, Docker, GitLab CI

MARLOWE PAYMENTS

2024

Backend Engineer - Billing Services · Lyon, France

Payments Data migration

- Implemented the invoicing engine of a subscription product, including proration and tax rules.
- Migrated 90,000 customer records off a legacy schema with a reversible, audited script.
- Took the billing module from 40% to 85% test coverage and added contract tests on the payment provider.
- Handled second-line production support: log analysis, root cause, fix, post-mortem.

Env. Python, Django, MySQL, Celery, pytest, Jenkins

KESTREL UTILITIES

2023 - 2024

Backend Developer - Meter Data Pipeline · Lyon, France

Energy Batch processing

- Rewrote the nightly meter-data import, taking its runtime from 6 hours to 40 minutes.
- Maintained a ten-year-old Django application: bug fixes, dependency upgrades, first test harness.

Env. Python, Django, PostgreSQL, Bash

VIREO ANALYTICS

2023 (6 months)

Data Engineering Intern · Grenoble, France

Data

- Built an ETL pipeline consolidating five marketing sources into a reporting warehouse.

Env. Python, Airflow, SQL

SKILLS

Languages	Python (primary), SQL, Bash
Backend	FastAPI, Django, REST API design, PostgreSQL, TimescaleDB, Redis, Celery
Data & scale	Time-series ingestion, ETL pipelines, Airflow, schema migrations, caching
Run & deploy	Docker, GitLab CI, Jenkins, on-call rotation, runbooks
Ramping up	Kubernetes: ramp-up - Docker and CI in production, orchestration not yet
Practices	pytest, contract testing, code review, incident post-mortems

EDUCATION

2019-2023	Institut Marbeau d'Ingenierie, Lyon	Engineering degree (MSc equiv.), Computer Science Distributed systems, databases, software architecture.
2022	University of Tarnbridge, Ireland	Exchange semester, taught in English
2017-2019	IUT de Saint-Aubin	Two-year technical degree, Computer Science

CERTIFICATIONS

- AWS Cloud Practitioner - exam scheduled, not yet passed
